

# Introductory Cyber Services

**Emergence has partnered with NSB Cyber to give insured clients access to something more valuable than a policy alone, but to a practical, trusted cyber security partner. Insurance plays a role in mitigating risk, but it's not a risk strategy.**

The real advantage comes from being prepared before something goes wrong. Through this partnership, Emergence insured can access a tailored, cost-efficient set of cyber security services designed to strengthen resilience, reduce risk exposure, and support insurability over time, without overengineering the process.

The services below are a curated starting point. They focus on the areas that matter most when lifting cyber maturity and defending against the types of threats organisations are facing every day.

## Essentials Cyber Security Risk Review

**\$5,000 (ex GST)**

The Essential Cyber Security Risk Review is an affordable, accessible option for organisations taking their first step into cyber. Designed with SMEs in mind, it provides a comprehensive review of your security posture against industry best practices.

The focus of this review is on identifying high-risk gaps and providing clear, practical recommendations for remediation. The review process is quick to complete and budget-friendly, designed to give SME's confidence that their first steps into cyber are meaningful, high-quality, and fit-for-purpose.

## Tabletop Simulation

**\$8,000 (ex GST)**

A cyber incident should never be the first time your teams are tested. Our tabletop exercises give leaders and teams the chance to rehearse their response in a safe, structured environment.

We help by designing customised scenarios that reflect your business, training your Board, Executives, and technical teams to act decisively under pressure. To do this, we leverage Crisis Commanded – our platform that is purpose-built for crisis readiness, combining structured simulation technology with deep, real-world response experience.

Whether focused on operational response, governance and leadership, or a full simulation across the whole organisation, our exercises ensure you are ready for when it matters most.

## Cyber Security Policy

**\$500 (ex GST)**

For small businesses, being asked for a copy of your cyber security policy is increasingly common. But many businesses either do not have one, or have documents that are inconsistent or outdated.

We develop a clear, consolidated Cyber Security Policy that brings your key controls together in one practical document. Written in simple language and aligned to common expectations, it gives you confidence when completing questionnaires and responding to due diligence requests. The result is a straightforward policy that supports your business and strengthens your overall security posture.

## Cyber Awareness Training

**\$3.50 per user, per month (ex GST)**

Human error remains one of the most common causes of cyber incidents, particularly phishing attacks that lead to Business Email Compromise or credential theft. Our Cyber Awareness Training platform helps organisations reduce this risk by educating staff on how to recognise and respond to common cyber threats.

Through short training videos and realistic phishing simulations, employees learn to identify suspicious emails, links, and requests in a safe environment. Over time, this builds stronger awareness across the organisation and helps turn employees into an effective line of defence against cyber attacks.

# Introductory Cyber Services

## Pentest Lite \$8,000 (ex GST)

A penetration test is one of the most effective ways to understand how exposed your organisation is to real-world technical cyber threats, without waiting for an actual incident.

Our Pentest Lite service provides a targeted, cost-effective assessment of your designated critical assets. Using a team of highly trained and experienced offensive security professionals, we simulate realistic attack scenarios in a controlled and authorised manner. Prioritised findings and remediation guidance are provided as a result of our penetration testing to help IT and security teams continue to bolster their defences.

## M365 Security Reviews Starting from \$6,000 (ex GST)

Microsoft 365 (M365) is a critical platform for most organisations, and one of the most commonly targeted in real-world cyber incidents. The impact from a M365 breach can range from financial fraud being conducted, IP theft, further supply chain attacks, to pure destructive actions.

Our M365 Security Review service provides a comprehensive assessment of your current M365 security posture. We evaluate not only how your organisation fares from an industry best practices perspective, but also from what matters most based on our incident experience.

Beyond a cookie-cutter assessment, we contextualise the findings based on your organisation's size, risk profiles, and how M365 is actually used in your environment. You will receive a report with not only an easy-to-digest executive summary, but also practical recommendations to help uplift your M365 security maturity.

Pricing is indicative. Prior to commencing any work, we will provide an engagement letter and agree our standard business terms and conditions.

Troy Filipcevic, CEO of Emergence Insurance; Shane Bell, CEO of NSB Cyber; and Brett Johnson, CCO of NSB Cyber.

This partnership combines real world cyber expertise with Australia's leading cyber insurance product to deliver a more resilient and outcomes-driven approach to managing cyber risk.

Shane Bell, CEO of NSB Cyber, highlights that cyber risk is no longer just technical, it is a material business and financial concern that requires genuine industry collaboration. By aligning two leading Australian-owned organisations, the alliance introduces a more integrated approach to cyber resilience, shifting the focus from risk transference to proactive risk reduction, preparedness, and confidence before an incident occurs.

Built on shared values, culture, and purpose, the partnership is designed to support Australian businesses with solutions tailored to local conditions, regulatory expectations, and evolving threat landscapes. It also reinforces the important role insurers and brokers play in strengthening resilience, with a clear commitment to working collaboratively across the ecosystem to deliver better outcomes when it matters most.
